# Breakthrough ACTION Nepal/JHU-CCP/CDPH-IOM

## Data scoping exercise

14<sup>th</sup> February 2020

# CDPH-Breakthrough ACTION Data Scoping Exercise

1. Data scoping
  - *Prioritization activity*
  - *Desk review*
  - *Introduction to evidence maps*
  - *Findings*
2. Next steps

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# CDPH-Breakthrough ACTION Data Scoping Exercise

- Supported by Breakthrough ACTION Nepal
- Conducted by students of MPH, MPHn, MHPE, CDPH, IOM (Kamal Raj Adhikari, Nabin Dhakal, Preena Lal, Preeti Bhattarai, Sapana Panta, Soniya Gurung, Sharmila Acharya, Sushma Pokharel)
- Duration- November 2019 to February 2020

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# CDPH-Breakthrough ACTION Data Scoping Exercise

## Objectives

- To learn about Data Scoping exercise process
- To create search protocol for literature review
- To summarise findings and generate Evidence map
- To write technical briefs based on Evidence map
- To disseminate findings of Data Scoping exercise

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# What is data scoping?

A data scoping exercise reviews and maps a wide range of literature with the purpose of envisioning where gaps and innovative approaches may lie.

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# Goals of the data scoping activity

1. Guide future research and SBC health planning based on prioritized health issues/research questions
  - *E.g. by creating evidence maps; developing analysis plans; identifying data sources to answer research questions; conducting simple data analyses*
2. Identify opportunities for future research, collaborations, skills-building
  - *E.g. Data dissemination for data use*

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# Components of the data scoping activity

1. Identification of prioritized health issues and research questions
2. Desk review
3. Evidence maps
4. Data availability, sharing and use

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# 1. Prioritization Activity

Identify health issue:

*Non-communicable diseases and socio-behavioural risk factors*

Identify research questions:

*What are the socio-behavioural risk factors contributing to NCDs in Nepal?*

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# Components of the data scoping activity

1. Prioritization of health issues and key research questions
2. Desk review
3. Evidence maps
4. Data availability, sharing and use

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# 2. Desk review

- Methods: Literature review and data summary
  - Identify a list of key search terms
  - Identify a list of databases to use (PubMed)

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

Teku, Kathmandu

# 2. Desk review

- Methods: Literature review and data summary
  - Literature review
    - Peer-reviewed literature
- **Inclusion criteria:** We used articles published in the last 10 years and related to Non-communicable diseases and socio-behavioural risk factors specifically in Nepal

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# 2. Desk review

- Data collection

	Abstracts retrieved
Pubmed; Search terms 1(743) + 2(979)	284
<b><i>Total relevant with full-texts pulled</i></b>	91
Total not relevant on initial review	193

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# 2. Desk review: Data summarization

Content summarized
Full reference
Organization affiliated
Publication type: peer-reviewed publication
Specific geographical location(s)
Study type: Qualitative, quantitative, or mixed methods
Primary audience(s) or populations of interest
Sample sizes
Primary health areas of interest: NCDs; risk behaviours
Specific health behaviors
Primary predictors or explanatory variables of interest
Specific SBCC intervention component discussed/described (if any)
Major findings (Summarized in 1 sentence only)
Relevant level(s) of the socio-ecological model: individual, household, community/societal, health facility, or structural/policy

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# 2. Desk Review: Data summarization

Number	Reference	Geographical location(s)	Study type: Qualita	Primary audien	Sample sizes	Primary health areas	Specific health behavior	Primary predictors or expl	Specific SBCC int	Major finding (Summa
1 NCD1	Tobacco smoking, chewing habits, alcohol drinking and the risk of head and neck cancer in Nepal Chun-Pin Chang, Bhola Siwakoti,	Chitwan, BPKMCH	Hospital-based Case-Control study	Head and Neck Cancer cases	HNC cases- 549; Controls- 601	Head and Neck Cancer	Tobacco smoking; Chewing habits (Tobacco, Supari, Zarda, Lwang, Pan Masala); Alcohol drinking	Types, frequency and duration of Tobacco smoking, Chewing habits and Alcohol drinking		Increased HNC risk for tobac 2.06), chewing habits (OR: 2.06), drinking (OR: 1.57; 95% CI: 1.03-2.37). The prevalence of tobacco smoking (PAF) was 24.3% for
2 NCD2	Study of the magnitude of diabetes and its associated risk factors among the tuberculosis patients of Morang, Eastern Nepal; Babita	Morang	Cross-sectional study	Tuberculosis patients	320	Co-morbidity- Tuberculosis ad Diabetes; Behavioral factors- Alcohol and Tobacco	Toacco consumption; Alcohol consumption; Fruits and vegetable consumption; Physical activity	Tobacco consumption, Alcohol consumption, Stress level; Family history		The univariate analysis report alcohol consumers, and stress with diabetes; while the multi alcohol consumer as the signi
3 NCD3	Analyzing Awareness on Risk Factors, Barriers and Prevention of Cervical Cancer among Pairs of Nepali High School Students and Prevalence of American Heart Association defined ideal cardiovascular health metrics in Nepal: findings from a nationally	Lalitpur	Descriptive Cross-sectional study	Adolescents; their mothers	253 pairs of adolescent students and their mothers	Cervical cancer, Adolescent health, Reproductive health; Prevention	Lifestyle; Cancer talk with others	Sex, Education level, Healthy diet, Cancer talk with others, Mother's Cancer Screening Practice among students; Age, Health Belief Model		Knowledge on cervical cancer students and mothers. Student and had a healthy diet had bet students' mothers had better k
4 NCD4	Lifestyle-related risk factors among patients with coronary artery disease in Nepal Pramila Gaudel, Marja Kaunonen,	Kathmandu, Sahid Gangalal National Heart Centre	Cross-sectional study	Adult (15-69 years of age)	4200	Cardiovascular disease	Physical activity, smoking and the consumption of fruits and vegetables	Physical activity, smoking behaviours (non-smoking, normal weight, sufficient physical activity and ideal diet), and three ideal		More than half of the partici 45-69 y age group having the females having better cardiov male counterparts (60.6% vs -
5 NCD5	The burden and correlates of multiple cardiometabolic risk factors in a semi-urban population of nepal: a community-based Self-Care Adherence And Barriers	Pokhara; Kathmandu;	Community-based cross-sectional study	CAD patients	224	Coronary artery disease (CAD)	Dietary habits, smoking, alcohol consumption, stress, physical activity, overweight or obesity and adherence to	Lifestyle-related risk factors: Dietary habits, smoking, alcohol consumption, stress, physical activity, overweight or obesity		The prevalence of risk factors 97%, with stress being the mc consumption the least. The m lifestyle-related risk factors.
6 NCD6				adults aged 25-64 years	2,310	Cardiometabolic risk factors (hypertension, diabetes, and overweight/obesity)	Dietary habits, smoking, alcohol consumption, physical activity	Socio-demographics and behavioural characteristics		Proportion of the participants harmful level (13%). Most of of physical activity (89%) but not consume the recommende

# Components of the data scoping activity

1. Prioritization of Health issues and key research questions
2. Desk review
3. Evidence maps
4. Data availability, sharing and use

Government of Nepal  
Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# 3. Evidence maps

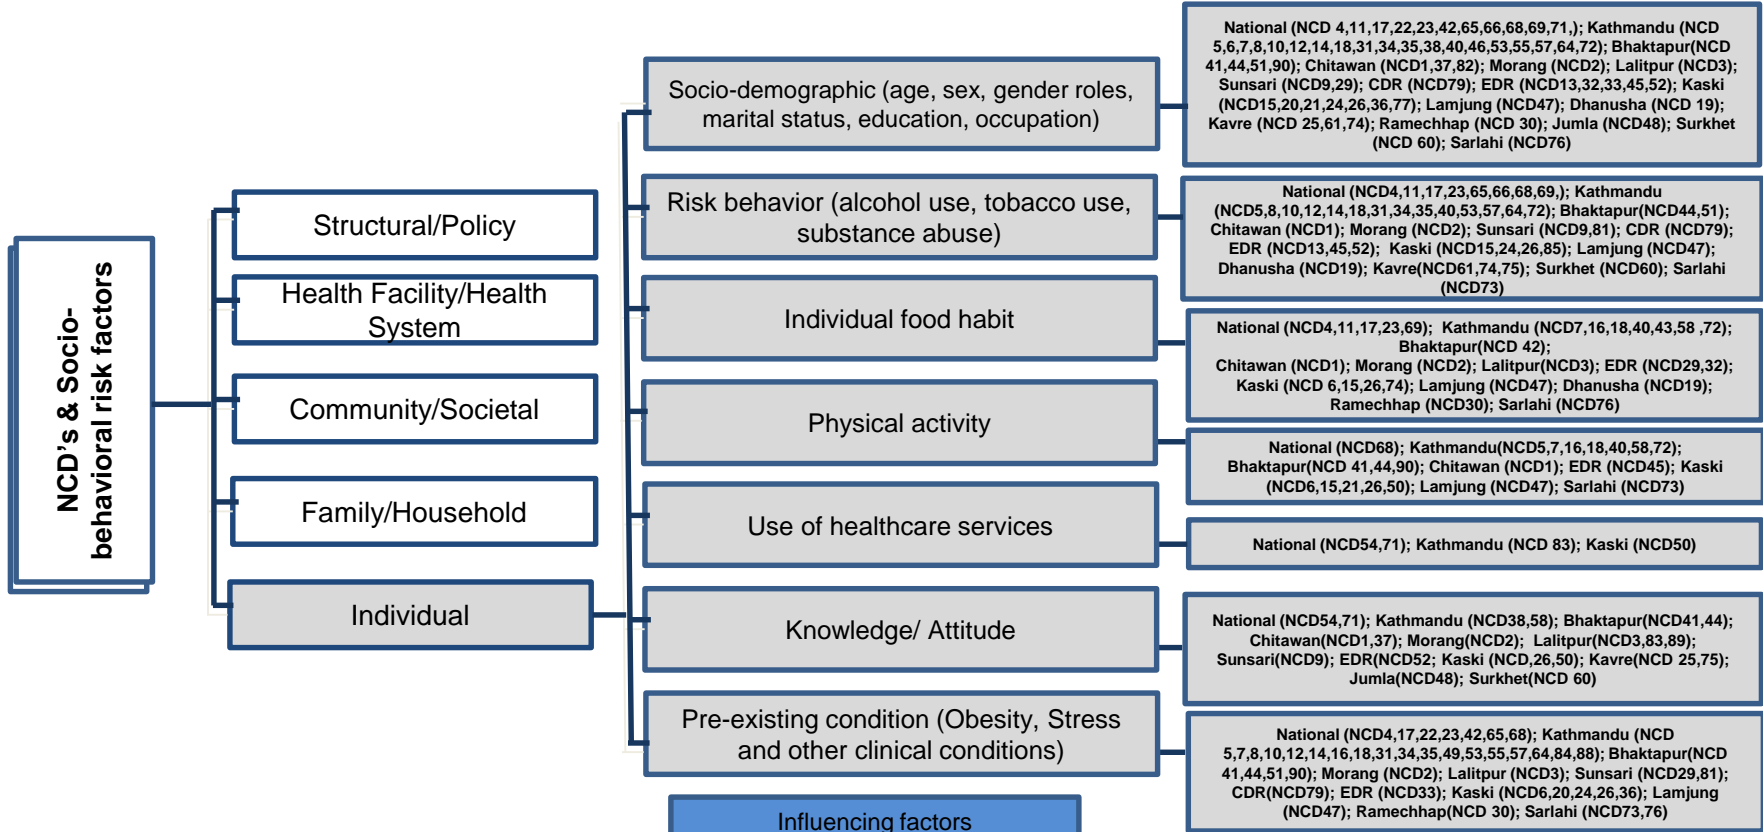

- Evidence maps offer a visual way to examine trends and gaps in existing literature
  - *Flexible*
  - *Can contain as little or as much detail as desired*
  - *Can be organized based on a specific theoretical approach*

Ministry of Health and Population  
National Health Education, Information  
and Communication Center  
Teku, Kathmandu

# Summary of Data Scoping exercise

- Majority of the studies were patient-centered and hospital based.
- Location of studies were mostly based on tertiary-care hospitals.
- Population-based studies were addressed by articles based on STEPS survey.
