

END
MALARIA
FOR GOOD

Play Your Part

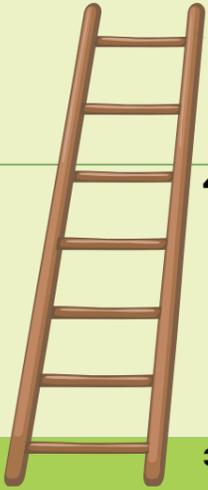

Mosquitoes and Ladders

How to play the game!

1. The game is played using a single dice, dice cup and four coloured game pieces. It can be played by a minimum of two players and a maximum of four players.
2. Each player MUST roll a "6" to begin movement on the game (roll a '6', then roll the dice again to move. E.g., If a player rolls a 6, then rolls a 5, he/she moves to number 5 box)
3. Successive rolls are used to move along the board till a player gets to the last square "60".
4. When a player lands on any red box with the mosquito, the player slides down to the proboscis of the mosquito and reads aloud the caption in the box. They also read aloud the caption in the box they land on.
5. A player climbs up the ladder when they land on the foot of the ladder in the green boxes, they read aloud the caption at the foot of the ladder before climbing up.
6. The first player to overcome all obstacles and get to box "60" wins the game. The number rolled MUST get the player to exactly '60' to win the game. (for example, if a player is on box '58' he/she MUST roll a dice to get the number '2' and win the game.)

60 You are malaria free. A malaria free Nigeria starts with you. Play your part!!	59 	58	57	56 I had a fever and did not immediately go to the hospital to check what is causing the fever. 	55	54	53 When my friends have a fever, I tell them not to waste their time going to the hospital since it is just ordinary fever. 	52	51
41	42	43	44	45 Seek care for fever within 24 hours so that it does not get worse.	46	47 My malaria test is negative, but I still took a malaria medicine. 	48	49 	50
40	39 I use only approved malaria medicine (ACT) to treat malaria when it is confirmed.	38	37	36	35 I had a fever and started taking malaria medicine without a malaria test. 	34 Treat malaria only when the test is positive. Malaria medicine can only work for malaria.	33 Fever is a sign of illness that could become worse. Seek care immediately when you have fever.	32	31
21 	22	23 When my friends are sick, I encourage them to get a malaria test instead of just taking medicine. It saves them a lot of time and worry!	24 I did not finish taking my ACT; the malaria is now back and is worse than before. 	25	26 Your fever may not be due to malaria. Test to confirm malaria before treatment.	27 	28	29 When a test confirmed my fever was malaria, I was given ACT for treatment and I finished taking all the doses.	30
20	19	18 My mosquito net is dirty and torn, mosquitoes enter through the holes to bite me and give me malaria. 	17 Complete the full dose of ACT so that malaria will be completely treated.	16	15	14 I go to the hospital within 24 hours when I have a fever. I do not delay seeking care for fever.	13	12 I do not sleep inside an insecticide treated mosquito net every night. Mosquitoes bite me and I have malaria. 	11
1 I sleep inside an insecticide treated mosquito net every night all year round and I am protected from mosquito bites that spread malaria.	2	3 Roll-up your insecticide treated net when not in use to protect it from dirt and tear. Care for your net, so it can last long.	4	5	6	7	8	9 Sleep inside an insecticide treated mosquito net every night to prevent bites from mosquitoes that spread malaria	10
